

Weight.....	270-354 lbs
Top Speed.....	4.5 kts
Persistence.....	6 months
Payload Capacity.....	60-110 lbs
Payload Voltage.....	5-28 V
Payload Peak Power.....	200 W
Max Stored Range (no solar).....	575+ NM
Surge Production Rate.....	10+ vehicles/mo

THE LIGHTFISH

Seasats' flagship platform is a persistent, low-logistics workhorse for streamlined maritime operations.

Whether you're deploying from a pickup truck, RHIB, or boat ramp, the Lightfish can be launched and recovered in minutes. Once in the water, resilient comms, intelligent sensing, and onboard processing ensure mission completion.

Lightfish have carried EO and IR cameras, SIGINT and EW payloads, and active and passive sonar systems.

Seasats was founded in 2020 by a group of sailors and engineers who wanted a better autonomous boat. The company has since deployed vehicles with Task Force 59, the Scripps Institution of Oceanography, Navy Special Warfare, NIWC, and other customers.
